

PDF Automation Server

Server application to automate PDF workflow and processing on Windows, Linux, Unix and Mac

Fully Portable:

100% Java

Platform Independent

Runs on Windows, Linux, Unix, Mac and browser

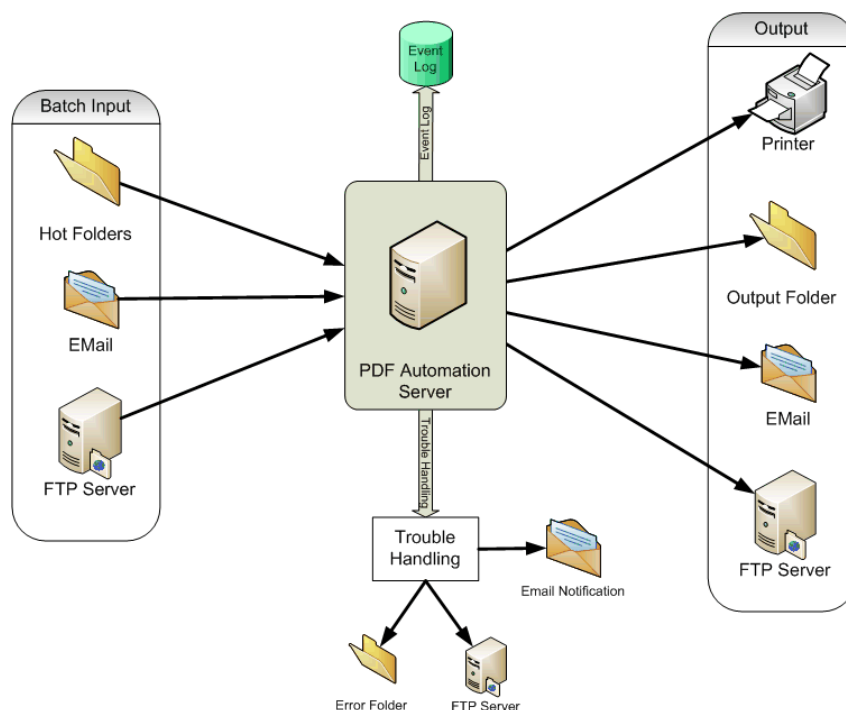

Automate the receiving, processing, and routing of PDF documents Streamline document workflows and circulation

PDF Automation Server (PAS) is a unique product to automate the receiving, processing and routing of PDF documents. Use PAS as an essential tool to streamline your document workflows and circulation in your organization.

PAS receives PDF documents from multiple sources concurrently, including email, ftp servers and local or network folders. Processes are defined independently for each document source to perform a number of functions on the documents, including **conversion, printing, optimization, PDF/A conversion, assembly, encryption, field extraction/merge and more.**

After processing the documents, PAS routes the original and modified documents to multiple destinations, including folders, printers, email and ftp servers.

Qoppa PDF Automation Server
